PROJECTS

WeatherApp website | REACT

MARCH 2024

- Implemented real-time weather data fetching through third-party APIs, allowing users to access current conditions, forecasts, and historical weather information.
- Utilized React's state management to efficiently handle user interactions and API responses, resulting in a dynamic and interactive application.
- Enhanced user interface and experience with Material-UI components and custom CSS, achieving a polished and intuitive design.

Simon Says Game Website | HTML , CSS , JAVASCRIPT

JAN 2024

- Designed and developed a Simon Says game website using HTML, CSS, and JavaScript, showcasing proficiency in front-end web development technologies.
- Implemented interactive gameplay features, including randomized sequences and user input validation, resulting in an engaging and intuitive user experience.

Spotify-Clone Website | HTML , CSS

Oct 2023

- Experienced web developer proficient in HTML and CSS, adept at creating user-friendly interfaces. Developed a Spotify clone website utilizing HTML and CSS, focusing on replicating key features and design elements of the popular music streaming platform. Implemented responsive design principles to ensure seamless user experience across devices
- Collaborated with team members to integrate interactive features such as playlists, search functionality, and user profiles. Received positive feedback for attention to detail and commitment to delivering a high-quality product.
